NMEA Messages

Of

SkyTraq Venus 6 GPS Receiver

Ver 1.0.2

Feb. 22, 2010

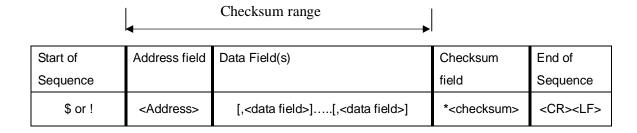

Introduction

The SkyTraq NMEA 0183 protocol is designed based on NMEA(National Marine Electronics Association) 0183 Standard which is a standard protocol for interfacing navigational devices, e.g. GPS and DGPS receivers over serial interface. The SkyTraq NMEA 0183 protocol is fully compliant with "NMEA 0183 Standard For Interfacing Marine Electronic Devices, Version 3.0.1". The standard may be obtained from NMEA at http://www.nmea.org.

NMEA Protocol Overview

Message Format

The structure of a NMEA message is shown below.

Start of Sequence

All sentences begin with the sentence start delimiter character "\$" or "!".

Address Field

The address Field is served to define the sentence. Characters with digits and upper case letters are permitted to be in the address field. It can not be a null field. This field is subdivided into 2 fields.

<xx></xx>	<xxx></xxx>
Talker Identifier	Sentence Formatter

Talker Identifier is always **GP** for a GPS receiver. The sentence formatter defines the format and the type of data.

Data Field(s)

Data Fields are delimited by a "," and contain valid characters specified in NMEA 0183 standard. It can be variable length fields.

Checksum

Checksum field is the 8-bit exclusive OR (no start or stop bits) of all characters in the sentence. Checksum consists of 2 characters and is represented as a hex number.

End of Sequence

All sentences always end with sentence termination delimiter <CR><LF>.
